

High Input Voltage Linear Charger

GENERAL DESCRIPTION

The J O 6278J C is a complete constant-current/ constant-voltage linear charger for single cell lithium battery. There's a temperature loop in chip. When the chip is overheated, the temperature loop automatically reduces the charging current, ensure safe charging, avoid overheating and obtain maximum charging speed. The charging current can be regulated by external resistance. The Max charging current is 1 A. No enable function, No NTC function.

FEATURE

- . Input voltage range 4.5V~6.5V , Maximum Voltage for the Power Input 28V
- . Charging battery voltage 4.2V/4.35V/4.4V (4.35V , 4.4V Charging voltage can be customized
- . Accuracy of charging voltage $\pm 1\%$,
- . Trickle/constant current/constant voltage charging
- . Maximum constant current charging current 1A , external resistance adjustable
- . Constant current charging accuracy $\pm 10\%$
- . VIN OVP 6.5V (VIN OVP can be customized to 21v)
- . When the chip is overheated, the temperature loop automatically reduces the charging current
- . Battery anti-irrigation protection : Static power consumption 0uA
- . Support single color light/dual color light display mode
- . package : SOT23-6 , ESOP8 , DFN2*2
- . ESD 2KV

APPLICATION

- . TWS
- . IOT Gadgets
- . Wearable Devices
- . Credential Keys
- . Wireless Remote
- . Electric toothbrush
- . Electric shaver
- . Electronic cigarette
- . Other applications

CHARGER CURRENT SET

Formula for setting charging current : $I = 880 / R_{SET}$

Such as: $R_{SET} = 1.76k$; Charging current $I = 880 / 1.76k = 500mA$
