

High Input Voltage Linear Charger

GENERAL DESCRIPTION

The "J O 7278J C" is a complete constant-current/constant-voltage linear charger for single cell lithium battery. Its compact package with minimum external components requirement makes the HM5056HA ideal for portable application. No external sense resistor or blocking diode is necessary for it. Build-in thermal feedback mechanism regulates the charge current to control the die temperature during high power operation or at elevated ambient temperature. The HM5056HA has a pre-charge function for trickle charging deeply discharged batteries. The fast charge current can be programmed by an external resistor. CV regulation mode is automatically enable once the batter's charge curve reaches the constant voltage portion. The output current then decays and is finally terminated once the charge current drops to 1/10th of the programmed value. The HM5056HA keeps monitoring the battery voltage and enable a new charge cycle once the voltage drops by 250mV Below the CV value.

CHARGER CURRENT SET

Formula for setting charging current : $I = 1000/R_{ISET}$

Such as: $R_{ISET} = 1000\Omega$; Charging current $I = 1000/1000 = 1A$

CHARGE TERMINATION CURRENT

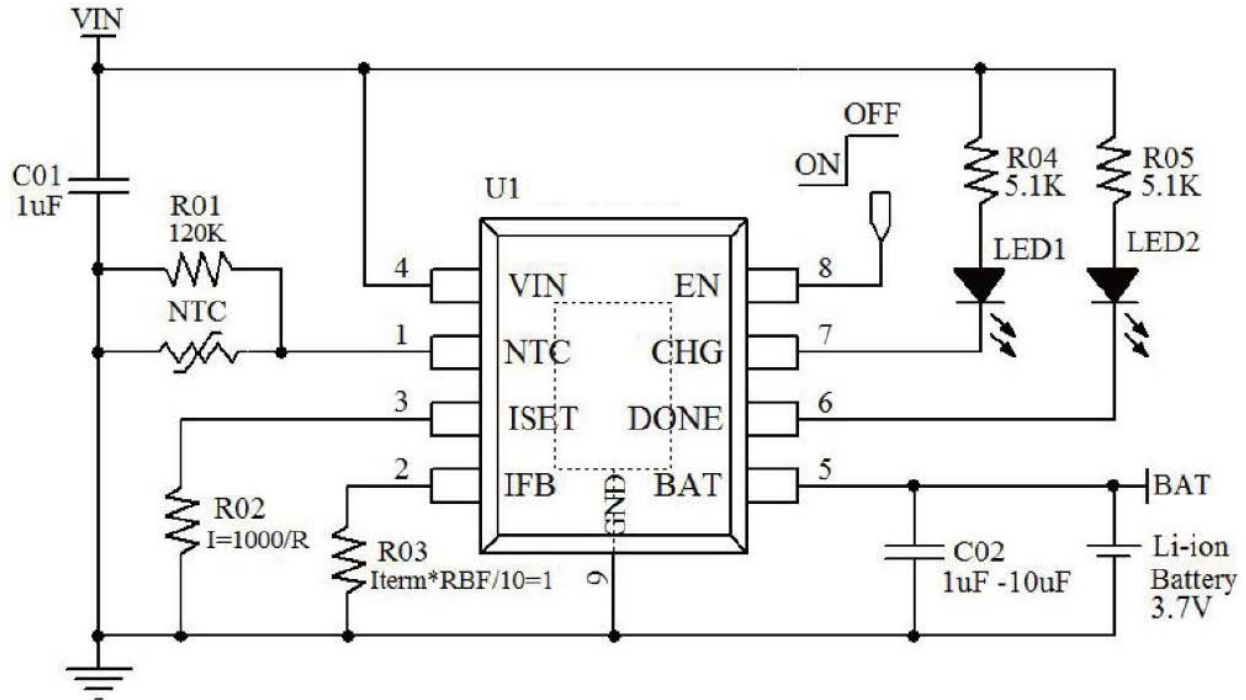

$I_{term} * R_{BF} / 100 = 0.1$ $R_{BF} = 10K$ · 则 $I_{term} = 1mA$
